Lab 03 - Solving the Poisson Problem (step-3)

Deal.II Users and Developers Training

SMR2909 - MHPC P2.5

Timo Heister heister@clemson.edu and Luca Heltai luca.heltai@sissa.it

1. See documentation of step-3 at https://www.dealii.org/8.4.0/doxygen/deal.II/step_3.html

- 3. Switch to vtk output and visualize in paraview. Figure out how to warp the solution by the solution variable.
- 4. Follow the instructions in "Modify the type of boundary condition" in the description of the tutorial.
- 5. Now also do "A slight variation of the last point" but use the value -0.5 for the boundary with indicator 1.
- 6. Change the setup to have f = 0.
- 7. Switch to an L-shaped domain and experiment with a combination of Dirichlet and Neumann boundary conditions. By experimentation, identify the faces adjacent to the re-entrant corner and apply Dirichlet conditions only there.
- 8. Bonus: Do "Convergence of the mean". Can you see the order h^2 ? Increase the polynomial order (you need to increase all orders of the quadratures in the program!) and check the convergence of the mean now.

^{2.} Copy and run step-3.
